EDUCATION

Master of Science

Computer Science

Georgia Institute of Technology

📅 2022 - 2026

🎓 GPA: 3.9/4

Bachelor of Science

Economics

(Data Science and Analytics)

Singapore Management University

📅 2018 - 2022

🎓 Cum Laude

SKILLS

- Data Wrangling (NumPy, Pandas)
- Data Visualization (Matplotlib, Seaborn, Plotly)
- Machine Learning (Scikit-learn)
- Model Building (TensorFlow, PyTorch)
- Database (Elasticsearch, SQL)
- Data Engineering (Hadoop, Spark, AWS, GCP, Azure)
- Backend (Streamlit, Flask, FastAPI, Django)
- Frontend (Svelte, Tailwind)
- Generative AI (Ollama, LangChain)
- Agentic Coding (Claude Code)

CERTIFICATIONS

- Deep Learning Specialization (DeepLearning.AI)
- Gen Infiniti WILEY Data Analyst Course
- Hackwagon Data Science 101
- AWS Certified Cloud Practitioner
- AWS Certified Solutions Architect - Associate

WORK EXPERIENCE

Modular Asset Management

Software Engineer

📅 Feb 2026 - Current

📍 Singapore

- Migrated legacy scripts and Excel Macro orchestrated via Task Scheduler into Python pipelines orchestrated by Apache Airflow on a Kubernetes, improving reliability and maintainability of daily jobs.
- Maintained production automation workflows to meet evolving operational requirements, ensuring continuity of daily business-critical processes.
- Built trade-volume and P&L agents that autonomously pull data from multiple sources, including Postgres and Outlook, providing insightful commentary.

ST Engineering (Mission Software & Services)

Senior AI Engineer

📅 April 2025 – Feb 2026

📍 Singapore

- Developed a RAG Chatbot POC from scratch, implementing a multi-agent system to automate data retrieval, filtering, visualization, and analysis.
- Improved NER model accuracy by 60% (from 50% to 80%) and integrated coreference resolution to de-duplicate entity references.
- Administered and secured a high-compliance, air-gapped infrastructure by deploying and configuring GitLab, Dataiku, and Stable Diffusion across enterprise servers and workstations.

Yokogawa Engineering Asia

Data Scientist

📅 August 2024 – April 2025

📍 Singapore

- Developed a proof-of-concept web application for shipping container number OCR utilizing a two-stage model, achieving 98.8% mAP; designed as an API for a management system to enhance efficiency and minimize human error.
- Improved existing Health Safety Equipment object detection model by increasing classes and created web application to demonstrate the POC.
- Refactored existing code for development branch of existing product to make improvements across OS-compatibility and to reduce time taken for the object detection pipeline through performance optimizations.

Ai Palette

Data Scientist

📅 May 2022 – April 2024

📍 Singapore

- Leveraged generative AI to introduce state-of-the-art image generation using Stable Diffusion XL as an API into a proof-of-concept solution.
- Spearheaded improvements to an existing production database by integrating advanced vectorsearch capabilities, significantly improving query efficiency and precision, reducing false positives by 70%.
- Deployed an ML model from end-to-end as a containerized API running on Kubernetes with social media data to predict user demographics.
- Innovated in-house web applications, streamlining, and transforming workflows for increased efficiency.
- Drove \$100K in revenue by developing and maintaining the Flavor Wheel visualization, which was critical to retaining a major client.
- Earned Google's Trailblazers Transformation Award for AI work, presenting project demos to representatives from Google, the EDB, and MDDI (MCI).

Data Science Intern

📅 Dec 2021 - April 2022

📍 Singapore

- Tailored custom analytics to meet and exceed client specifications.
- Strategically minimized noise in unstructured text data using adept regex techniques, curtailing false positives.
- Managed pipeline maintenance and implemented Python-based automation for logic validation and data wrangling.
